DO NOT OPEN THIS TEST BOOKLET UNTIL YOU ARE ASKED TO DO SO

## COMBINED COMPETITIVE (PRELIMINARY) EXAMINATION, 2013

Serial No.	MECHANICAL ENGINEERING	A
	Code No. 14	A

Time Allowed: Two Hours

Maximum Marks: 300

## **INSTRUCTIONS**

- 1. IMMEDIATELY AFTER THE COMMENCEMENT OF THE EXAMINATION, YOU SHOULD CHECK THAT THIS TEST BOOKLET DOES NOT HAVE ANY UNPRINTED OR TORN OR MISSING PAGES OR ITEMS, ETC. IF SO, GET IT REPLACED BY A COMPLETE TEST BOOKLET.
- 2. ENCODE CLEARLY THE TEST BOOKLET SERIES A, B, C OR D AS THE CASE MAY BE IN THE APPROPRIATE PLACE IN THE RESPONSE SHEET.
- 3. You have to enter your Roll Number on this Test Booklet in the Box provided alongside. DO NOT write anything else on the Test Booklet.

Your Roll No.

- 4. This Booklet contains 120 items (questions). Each item comprises four responses (answers). You will select one response which you want to mark on the Response Sheet. In case you feel that there is more than one correct response, mark the response which you consider the best. In any case, choose ONLY ONE response for each item.
- 5. In case you find any discrepancy in this test booklet in any question(s) or the Responses, a written representation explaining the details of such alleged discrepancy, be submitted within three days, indicating the Question No(s) and the Test Booklet Series, in which the discrepancy is alleged. Representation not received within time shall not be entertained at all.
- 6. You have to mark all your responses ONLY on the separate Response Sheet provided. See directions in the Response Sheet.
- 7. All items carry equal marks. Attempt ALL items. Your total marks will depend only on the number of correct responses marked by you in the Response Sheet.
- 8. Before you proceed to mark in the Response Sheet the response to various items in the Test Booklet, you have to fill in some particulars in the Response Sheet as per instructions sent to you with your Admit Card and Instructions.
- 9. While writing Centre, Subject and Roll No. on the top of the Response Sheet in appropriate boxes use "ONLY BALL POINT PEN".
- 10. After you have completed filling in all your responses on the Response Sheet and the examination has concluded, you should hand over to the Invigilator only the Response Sheet. You are permitted to take away with you the Test Booklet.

DO NOT OPEN THIS TEST BOOKLET UNTIL YOU ARE ASKED TO DO SO

## **ROUGH WORK**

EIJ-50100-A

	If two forces of magnitude P, act at an angle (A) $2P \cos \theta$		ltant will be : 2P cos θ/2	
	(A) $2P \cos \theta$ (C) $2P \sin \theta$	` /	P cos 2θ	
2.	In a statically determinate problem, the num	ber of non-tri	vial equilibrium equations :	
	(A) equals the numbers of unknowns	(B)	is less than number of unknowns	
	(C) is more than number of unknowns	(D)	cannot be determined	
3.	The number of independent scalar equations system is:	s of equilibriu	ım of a rigid body under concurrent f	force
	(A) 4	(B)	3	
	(C) 5	(D)	6	
4.	D'Alembert principle states that system of fo with the inertia force of the body:	orces acting o	on a body is following type of equilibrate	rium
	(A) static	(B)	dynamic	
	(C) both	(D)	none	
6.	<ul> <li>(A) irrespective of the nature of force field</li> <li>(B) only in gravitational field</li> <li>(C) only if the total work done by the parti</li> <li>(D) only if the forces is tangential to the training</li> <li>In the impact problem the following conditions</li> </ul>	cle in movin ijectory ons must alw		
	(A) the total kinetic energy remains unchar			
	(B) the total linear momentum remains unc	•	uliadhadha ag affisiant af mastitution	_
	<ul><li>(C) the magnitude of the total linear mome.</li><li>(D) none of the above</li></ul>	ntuin 18 muiu	phed by the co-efficient of restitution	1
7.	The displacement of a particle undergoint $^3-21t^2+60t$ meters. The acceleration of the (A) $-18 \text{ m/s}^2$ (C) $9 \text{ m/s}^2$	he particle, w (B)		n by
8.	Two metallic blocks having masses in the r plane starting from rest position. When the b have their kinetic energies in the ratio:			
	(A) 2:3	(B)	3:5	
	(C) 3:2	(D)		

9.	If a shaft made of ductile material is subjected to comb based on which one of the following theories would		
	(A) Maximum principle stress theory	_	Maximum shear stress theory
	(C) Maximum strain energy theory	(D)	Maximum distortion energy theory
10.	If the area, length and the stress to which a bar is su energy of the bar will be:	bject	ted be all doubled, then the elastic strain
	(A) Doubled	(B)	Three times
	(C) Four times	(D)	Sixteen times
11.	If a cantilever beam of length $l$ , the concentrated moment $P \times l$ , the deflection will increase by :	l loac	d P at the end is replaced by a bending
	(A) 1 time	(B)	1.5 times
	(C) 1.25 times	(D)	2 times
12.	A single degree of freedom spring mass damper smass $m = 10 \text{ kg}$ and a damper of damping constant cwill be:	= 24	0 N-sec/m, its damped natural frequency
	(A) 18 rad/sec	(B)	16 rad/sec
	(C) 20 rad/sec	(D)	22 rad/sec
13.	The ratio of maximum displacement of the forced v known as:	ibrat	ion to the deflection due to static force is
	(A) Damping Factor	(B)	Damping Coefficient
	(C) Logarithmic Decrement	(D)	Magnification Factor
14.	Stress concentration in static loading is:		
	(A) Very serious in ductile material	(B)	Very serious in brittle material
	(C) Less serious in brittle material	(D)	None of the above
15.	If n links are connected at the same joint, the joint is	s equ	ivalent to:
	(A) $(n-1)$ binary joints	(B)	(n-2) binary joints
	(C) $(n-3)$ binary joints	(D)	(2n-1) binary joints
16.	The mechanical advantage for a rigid link AB, wh (neglecting friction effect), is given by:	ose d	riving end is A whereas driven end is B
	$(A) V_A/V_B$	(B)	$V_{_{ m B}}/V_{_{ m A}}$
	$(C) V_{B} V_{A}$		None of the above
17.	If a mechanism has n links, then the number of insta	antan	eous centers would be equal to:
	(A) n	(B)	n(n-1)/2
	(C) n/2		(n-1)

EIJ	-50100-A	5 11	[Turn over		
		, ,			
	(C) Chromium	` ′	Silicon		
۷٠.	(A) Nickel		Cobalt		
26	Binding material used in cemented carbide tools is:				
	(C) cutting angle	(D)	shear angle		
	(A) lipangle		rake angle		
25.	Angle between the shear plane and work surface is				
	(C) Aluminium	` ′	High carbon steel		
	(A) Cast iron	(B)	Bronze		
24.	Material having highest cutting speed is:				
	(C) maximum, zero, maximum	(D)	zero, zero, maximum		
	(A) constant		zero, maximum, zero		
	and (iii) End of engagement will be:	(D)			
23.	For a cycloidal tooth profile, pressure angle at (i) Co	omm	encement of engagement, (ii) Pitch point		
		, ,			
	(C) One fourth of the first one	` ′	One and half times the first one		
	(A) Four times the first one	(B)	Same at the first one		
	will be:	e ene	agy stored in the fatter at the same speed		
22.	If the rotating mass of a rim type flywheel is distributed radius is half the mean radius of the former, then the				
22	If the votating mass of a nim type flow head is distribu-	tod -	n on otherwise trues flywybool wile account		
	(D) ratio of mean resisting torque to the work don	e pei	cycle		
	(C) ratio of the maximum energy and minimum energy				
	(B) difference between the maximum and minimum		ergies		
	(A) sum of maximum and minimum energies				
21.	The maximum fluctuation of the energy is the:				
	(c) compound gent trum	(1)	~pre Sem mani		
	(C) Compound gear train		Simple gear train		
∠U.	(A) Epicyclic gear train  (A) Epicyclic gear train		Reverted gear train		
20	In a clock mechanism, the gear train used to connect	ct mi	nute hand to hour hand is:		
	(C) always greater than unity	(D)	none of the above		
	(A) equal to velocity ratio		reciprocal of velocity ratio		
19.	The train value of a gear train is:	<i>~</i> :			
	(C) Double Hooke's joint		Grass-Hopper mechanism		
	(A) Ackermann gearing		Hooke's joint		
18.	8. If a constant velocity ratio of driving and driven shafts is required then the mechanism used is :				

27.	The usual ratio of forward and return stroke in shap (A) 2:1 (C) 2:3	(B)	: 1:2 3:2
28.	Tool life is most affected by: (A) cutting speed (C) feed and depth		tool geometry microstructure of material being cut
29.	Poor surface finish results due to: (A) heavy depth of cut (C) high cutting speed		low cutting speed coarse feed
30.	Abrasive used for grinding ceramics and tungsten c (A) Diamond (C) Silicon carbide	(B)	le is : Alumina Boron carbide
31.	A twist drill is a:  (A) side cutting tool  (C) end cutting tool		front cutting tool none of these
32.	Gantt chart is used for:  (A) inventory control  (C) production schedule		material handling machine repair schedules
33.	The main object of scientific layout is:  (A) to produce better quality of product  (C) to minimise production delays	` ′	to utilise maximum floor area all of these
34.	In value engineering, the term value refers to: (A) manufacturing cost of the product (C) total cost of the product		selling price of the product utility of the product
35.	In inventory control theory, the economic order qual (A) average level of inventory (B) optimum lot size (C) capacity of a warehouse (D) lost size corresponding to break-even analysis		is:
36.	Production cost refers to prime cost plus: <ul> <li>(A) factory overheads</li> <li>(B) factory and administration overheads</li> <li>(C) factory, administration and sales overheads</li> <li>(D) factory administration sales overheads and principles.</li> </ul>	ofit	

37.	A systematic job improvement sequence will consist (A) motion study (C) job enrichment	(B)	time study all of these
38.	Military type of organisation is known as: <ul><li>(A) line organisation</li><li>(C) line and staff organisation</li></ul>		functional organisation line, staff and functional organisation
39.	The procedure of modifying work content to give involving employees in planning, organisation and (A) job enlargement (C) job rotation	contr (B)	
40.	Fixed position layout is also known as: (A) analytical layout (C) static product layout	, ,	synthetic layout none of these
41.	Slag inclusion in casting is a:  (A) surface defect  (C) superficial defect		internal defect none of the above
42.	The most suitable material for die casting is: (A) Steel (C) Nickel	` ′	Cast Iron Copper
43.	Draft on pattern for casting is:  (A) shrinkage allowance  (B) identification number marked on it  (C) taper to facilitate its removal from mould  (D) for machining allowance		
14.	Sprue in casting refers to: (A) gate (C) riser		runner vertical passage
45.	Ornaments are cast by: (A) die casting (C) pressed		continuous casting centrifugal casting
16.	The aim of value engineering is to: (A) find the depreciation value of a machine (B) determine the selling price of a product (C) minimize the cost without change in quality of (D) all of the above	the p	roduct

17.	In time study, the rating factor is applied to determing (A) standard time of a job (C) fixation of incentive rate	(B)	merit rating of the worker normal time of a worker
18.	CPM is the:  (A) time oriented technique  (C) activity oriented technique		event oriented technique target oriented technique
19.	Simplex method is the method used for: (A) value analysis (C) linear programming		network analysis queuing theory
50.	Which of the following wage incentive plans guarant paid for the fixed percentage of time saved?  (A) Halsey plan  (C) Rowan plan	(B)	minimum wage to a worker and bonus is  Gantt plan  Emerson's efficiency plan
51.	Job evaluation is the method of determining the :  (A) relative values of a job  (C) worth of the machine		worker's performance on a job value of overall production
52.	The routing function in a production system design (A) manpower utilisation (B) quality assurance of the product (C) machine utilisation (D) optimising material flow through the plant	is coi	ncerned with :
53.	Direct expenses include:  (A) factory expenses  (C) administrative expenses		selling expenses none of these
54.	String diagram is used:  (A) for checking the relative values of various layor (B) when a group of workers are working at a pla (C) where processes require the operator to be m (D) all of the above	ice	from one work place to another
55.	Which of the following types of layout is suitable fo (A) product layout (C) fixed position layout	(B)	omobile manufacturing concern ? process layout combination layout

56.	Queuing theory is associated with:				
	(A) inventory	(B)	sales		
	(C) waiting time	(D)	production time		
57.	PERT requires:				
	(A) single time estimate	(B)	double time estimate		
	(C) triple time estimate	(D)	none of these		
58.	Which of the following statements is correct?				
	(A) A-B-C analysis is based on Pareto's prin	ciple			
	(B) Simulation can be used for inventory con	trol			
	(C) Economic order quantity formula ignores	s variations	s in demand pattern		
	(D) all of the above				
59.	In break even analysis, total cost consists of:				
	(A) fixed cost + sales revenue	(B)	variable cost + sales revenue		
	(C) fixed cost + variable cost	(D)	fixed cost + variable cost + profit		
60.	In order to avoid excessive multiplication of fa	acilities, the	e layout preferred is:		
	(A) product layout	(B)	process layout		
	(C) group layout	(D)	static layout		
61.	Which of the following can be regarded as g commonly encountered temperature limits?	gas so that	gas law could be applicable within the		
	•	( <b>D</b> )	O. N. water veneur		
	(A) O <sub>2</sub> , N <sub>2</sub> , steam, CO <sub>2</sub>		O <sub>2</sub> , N <sub>2</sub> , water vapour		
	(C) $SO_2$ , $NH_3$ , $CO_2$ , moisture	(D)	$O_2$ , $N_2$ , $H_2$ , air		
62.	A closed system is one in which:				
	(A) mass does not cross boundaries of the system, though energy may do so				
	(B) mass crosses the boundary but not the energy				
	(C) neither mass nor energy crosses the bour		-		
	(D) both energy and mass cross the boundari	ies of the s	ystem		
63.	Absolute zero pressure will occur:				
	(A) at sea level				

(B) at the centre of the earth

(D) under vacuum conditions

(C) when molecular momentum of the system becomes zero

64.	Intensive property of a system is one whose value:  (A) depends on the mass of the system, like volume  (B) does not depend on the mass of the system, like temperature, pressure, etc.  (C) is not dependent on the path followed but on the state  (D) is dependent on the path followed and not on the state			
65.	The equation $\left(p + \frac{a}{v^2}\right)(v - b) = R$ is known as:			
	<ul><li>(A) Real gas equation</li><li>(C) van der Waal's equation</li></ul>		Maxwell's equation Avogadro's equation	
66.	The basis for measuring thermodynamic property (A) zeroth law of thermodynamics (C) second law of thermodynamics	(B)	nperature is given by: first law of thermodynamics third law of thermodynamics	
67.	If a fluid expands suddenly into vacuum through an is called:	orific	ce of large dimension, then such a process	
	(A) free expansion (C) adiabatic expansion		hyperbolic expansion parabolic expansion	
68.	Steam flow through a nozzle is considered as: <ul> <li>(A) constant volume flow</li> <li>(C) adiabatic flow</li> </ul>		constant pressure flow isothermal flow	
69.	The following cycle is used for air craft refrigeration	n:		
	<ul><li>(A) Brayton cycle</li><li>(C) Carnot cycle</li></ul>	, ,	Joule cycle Reversed-Brayton cycle	
	An ideal gas at 27°C is heated at constant pressu temperature of gas then will be:	ıre til	ll its volume becomes three times. The	
	(A) 81 °C (C) 627 °C		900 °C 927 °C	
71.	When two gases suddenly mix up with each other to (A) decrease (C) remain same	(B)	esultant entropy of the system will : increase attain negative value	
72.	If air is compressed adiabatically from atmospheric ratio of 6, then pressure at the end of compression (A) 6 ata (B) less than 6 ata (C) more than 6 ata (D) less or more than 6 ata depending on tempera	conc shall	dition in a cylinder having compression be :	
EIJ	-50100-A	10		

73.	The air-fuel ratio of the petrol engine is controlled by	by:	
	(A) fuel pump	•	governor
	(C) injector		carburettor
	, , , ,	` /	
74.	Engine pistons are usually made of aluminum alloy	becai	use it:
	(A) is lighter	(B)	wears less
	(C) absorbs shocks	(D)	is stronger
75.	For maximum power generation, the air fuel ratio f	_	_
	(A) 9:1	` /	12:1
	(C) 15:1	(D)	18:1
7.			
76.	In a naturally aspirated diesel engine, the air is supp		•
	(A) a supercharger		a centrifugal blower
	(C) a vacuum chamber	(D)	an injection tube
77	Ignition quality of petrol is expressed by:		
//.	(A) octane number	(B)	cetane number
	(C) calorific value	` ′	self ignition temperature
	(c) caroffic value	(D)	sen ignition temperature
78.	Ignition timing of a multi cylinder petrol engine can	be ac	liusted by :
	(A) rotating the crank		adjusting the spark plug gap
	(C) adjusting ignition coil position		rotating the distributor
		` '	
79.	The elements of most concern in regard to pollution	n cau	sed by engines are:
	(A) CO and CO <sub>2</sub>	(B)	CO and hydrocarbons
	(C) CO <sub>2</sub> and hydrocarbons	(D)	hot products of combustion
80.	Water boils when its vapour pressure:		
	(A) equals that of the surroundings		
	(B) equals 760 mm of mercury		
	(C) equals to atmospheric pressure		
	(D) equals the pressure of water in the container		
0.1	XXI:1 C4 C4	• ,	
81.	Which of the following gases has the highest calorif		
	(A) producer gas		coal gas
	(C) coke oven gas	(D)	blast furnace gas
82.	The diameter of Cornish boiler is of the order of:		
02.	(A) 1-2 m	(B)	1.5-2.5 m
	(A) 1-2 m (C) 2-3 m	` ′	2.5-3.5 m
	(C) 2-3 m	(D)	2.J · J · J · III

83.	Which of the following is fire tube boiler?			
	(A) locomotive boiler	(B)	Babcock and Wilcox boiler	
	(C) Stirling boiler	(D)	all of the above	
84.	Which device is used in thermal power plants to reduce level of pollution?			
	(A) induced draft fan		precipitator	
	(C) chimney	. ,	pulveriser	
85.	De-aeration of feed water is carried out because it	redu	ces:	
	(A) cavitation of boiler feed pumps	(B)	corrosion caused by oxygen	
	(C) heat transfer coefficient		pH value of water	
86.	As a result of blade friction the relative velocity a relative velocity is:	at out	let of impulse turbine compared to inlet	
	(A) nearly same	(B)	2% less	
	(C) 10-15% less	` '	30% less	
87.	Commonly used method of governing in steam turk	bines	is by:	
	(A) throttle governing		nozzle control governing	
	(C) bypass governing	(D)	hydraulic governing	
88.	Reheat cycle in steam power plant is used to:  (A) prevent excess of 10-12% moisture content in (B) utilize heat of the flue gases  (C) increase plant efficiency  (D) improve condenser performance	n last	stages of turbine	
89.	For a convergent divergent nozzle, the mass flow rinlet pressures:	ate re	emains constant if the ratio of exit and	
	(A) is less than critical pressure ratio	(B)	is equal to the critical pressure ratio	
	(C) is more than critical pressure ratio	(D)	is infinity	
90.	The maximum velocity attainable at the throat of a	stean	n nozzle is :	
	(A) supersonic velocity		slightly less than sonic velocity	
	(C) sonic velocity	(D)	slightly more than sonic velocity	
91.	The effect of friction in nozzle is to:			
	(A) keep dryness fraction constant			
	(B) increase dryness fraction			
	(C) decrease dryness fraction			
	(D) first increase dryness fraction up to a certain l	imit a	and then decrease	

92.	The super saturation of steam results in slight:		
	(A) increase in entropy		increase of final dryness fraction
	(C) increase of discharge	(D)	all of the above
03	The most efficient method of compressing air is to	comr	arace it.
93.	(A) isothermally	_	adiabatically
	(C) isentropically	, ,	as per law $PV^n = C$
	1 2	` /	•
94.	$Ae roplanes\ employ\ following\ type\ of\ compressor:$		
	(A) radial flow	` ′	axial flow
	(C) centrifugal	(D)	combination of above
95.	Ratio of indicated horse power and brake horse po	wer	is known as :
	(A) mechanical efficiency		volumetric efficiency
	(C) isothermal efficiency	(D)	relative efficiency
0.5			
96.	A compressor at high altitude will draw:	( <b>D</b> )	loss poyyar
	<ul><li>(A) more power</li><li>(C) same power</li></ul>		less power none of the above
	(c) same power	(D)	none of the above
97.	Thermal conductivity of solid metals with rise is ten	npera	ture normally :
	(A) increases	(B)	decreases
	(C) remains constant	(D)	unpredictable
90	Heat is transferred by all three modes, viz, conduct:	ion c	convection and radiation in
90.	(A) electric heater		steam condenser
	(C) refrigerator condenser coils	` ′	boiler
		, ,	
99.	Ratio of heat flow $q_1/q_2$ from two walls of same the	nickn	ess having their thermal conductivities
	as $k_1 = 2k_2$ will be:	(D)	1
	(A) 0.5 (C) 2	(B) (D)	
		(D)	•
100.	In heat exchangers, degree of approach is defined a	as the	difference between temperatures of:
	(A) cold water inlet and outlet	` ′	hot medium inlet and outlet
	(C) hot medium outlet cold water inlet	(D)	hot medium outlet cold water outlet
101	The value of Prandlt number for air is around:		
101.	(A) 0.1	(B)	0.3
	(C) 0.7		1.7
		` /	
102.	The energy distribution of an ideal reflector at high		
	(A) shorter wavelength		longer wavelength
	(C) remains same at all wavelengths	(D)	wavelength has nothing to do with it
Terr	50100 A	12	[7]
LIJ.	-50100-A	13 	[Turn over

(A	the heat transfer equation $\nabla^2 T = 0$ is known as: Laplace equation Fourier equation		General equation of heat transfer Poisson's equation		
(A	nermal radiation extends over the range of : 0.01 to 0.1 $\mu$ 100 to 250 $\mu$		$0.1$ to $100\mu$ $250$ to $1000\mu$		
(A	ne boiling point of ammonia is:  a) 0 °C  b) -33.3 °C	, ,	-50 °C 33.3 °C		
(A	ne ton of refrigeration corresponds to: 2 210 kJ/min 335 kJ/min	` ′	210 kJ/h 335 kJ/h		
(A	ne refrigerant for a refrigerator should have :  a) high sensible heat b) high latent heat	, ,	high total heat low latent heat		
(A	efrigeration in aeroplanes usually employs the follows:  O CO <sub>2</sub> Freon-22	_	Freon-11		
<ul> <li>109. In a flooded type evaporator of a refrigerator, an accumulator at suction of the compressor is used to</li> <li>(A) collect liquid refrigerant and prevent it from going to compressor</li> <li>(B) detect liquid in vapour</li> <li>(C) superheat the vapour</li> <li>(D) collect vapours</li> </ul>					
(A	hen two refrigerants are mixed in the proper ration) synthetic refrigerant high pressure refrigerant		auxiliary refrigerant		
(A	ne most suitable refrigerant for a commercial ice p brine Freon		$NH_3$		
(A (B (C	ew point temperature is constant as long as there ) no change in moisture content of the air ) no change in volume of air ) no change in dry bulb and wet bulb temperatu ) no change in relative and specific humidity of a	re			

(A) (B) (C)	<ul> <li>13. The comfort conditions in air conditioning are:</li> <li>(A) 22 °C dry bulb temperature and 60% relative humidity</li> <li>(B) 25 °C dry bulb temperature and 100% relative humidity</li> <li>(C) 20° C dry bulb temperature and 75% relative humidity</li> <li>(D) 15° C bulb temperature and 80% relative humidity</li> </ul>					
114. Air	is normally dehumidified by :					
	injecting water	(B)	passing steam			
	heating	(D)	cooling			
115. A f	luid in equilibrium cannot sustain :					
(A)	tensile stress	(B)	compressive stress			
(C)	shear stress	(D)	bending stress			
116. Which of the following instrument can be used for measuring speed of an aeroplane?						
(A)	orifice plate	(B)	hot wire anemometer			
(C)	rotameter	(D)	pitot tube			
117. Euler's dimensionless number relates the following:						
(A)	Inertial force and gravity	(B)	Viscous force and Inertial force			
(C)	Pressure force and Inertial force	(D)	Pressure force and viscous force			
118. Power transmitted through a pipe is maximum when the loss of head due to friction is:						
(A)	one-half of the total head supplied	(B)	one-third of the total head supplied			
(C)	one-fourth of the total head supplied	(D)	zero			
119. The efficiency of a centrifugal pump is maximum when its blades are:						
(A)	straight	(B)	bent forward			
(C)	bent backward	(D)	bent forward first and then backward			
120. In axial flow fans and turbines, fluid enters and leaves as follows:						
(A)	radially, axially	(B)	axially, radially			
(C)	axially, axially	(D)	radially, radially			

## **ROUGH WORK**
