1. The thermal conductivity k of a liquid metal is predicted via the empirical equation $\mathrm{k}=$ $A \exp (B / T)$, where $k$ is in $J s-1 m-1 K-1$ and $T$ is absolute temperature in $K$. $A$ and $B$ are constants. The units of $A$ and $B$ are, respectively,
(A) Js-1m-1K-1 and K-1 (B) Js-1m-1K-1 and K
(C) J-1 smK and K-1 (D) J-1 smK and K
2. \% Excess air for combustion process is defined as
(O2 entering the process-O2 required)
(A) \% Excess air = x 100

O 2 required
( O 2 required - O 2 entering the process)
(B) \% Excess air = $\qquad$
O2 entering the process
O2 required
(C) \% Excess air = x 100
( O 2 entering the process -O 2 required)
O2 entering the process
(D) \% Excess air = x 100
(O2 required - O2 entering the process)
3. To prepare a solution of $50 \%$ sulfuric acid, a dilute waste acid containing $27 \%$ sulfuric acid is fortified with a fresh acid containing $96 \%$ sulfuric acid. The amount of fresh acid required for each 100 kg of dilute waste acid is
(A) 13.5 kg (B) $25 \mathrm{~kg}(\mathrm{C}) 50 \mathrm{~kg}(\mathrm{D}) 100 \mathrm{~kg}$
4. A flue gas analysis gave $10 \% \mathrm{O}, 25 \% \mathrm{CO} 2$ and $65 \% \mathrm{~N} 2$ at $160^{\circ} \mathrm{C}$ and 760 mm Hg . The ratio of partial pressures of CO 2 to O 2 is equal to
(A) 1 (B) 2
(C) 2.5
(D) 4
5. In the extraction of nicotine from a nicotine-water solution by kerosene, the pressure and temperature are kept constant. The available degree(s) of freedom is/are
(A) 0 (B) 1 (C) 2 (D) 3
6. The hydrostatic equation of pressure $P$ with height $h$ of an incompressible fluid of density $\rho$ and specific weight $y$ is
(A) $P=\rho / h(B) P=y / h$
(C) $P=\rho h(D) P=y h$
7. A gas is being compressed from an enthalpy of $489 \mathrm{~kJ} / \mathrm{kg}$ to $509 \mathrm{~kJ} / \mathrm{kg}$ in a steady state open process. The entry and exit velocities of the gas are zero and $60 \mathrm{~m} / \mathrm{s}$, respectively. Assume that there is no heat loss or gain, no reaction, and potential energy change is negligible. If the load is $100 \mathrm{~kg} / \mathrm{h}$ of gas, the work done on the gas is equal to
(A) 2000 kJ
(B) 2180 kJ (C) 2500 kJ
(D) 3000 kJ
8. The corresponding Maxwell relation for the Gibbsian equation $d G=-S d T+V d P$ is
(A) (B)
(C) (D)

Statement for Linked Answer - Questions 9 and 10:
A system is taken from state A to state B along path ACB where 100 J of heat flows into the system and the system does 40 J of work.
9. How much heat flows into the system along path AEB if the work done by the system is 20 J ?
(A) 20 J
(B) 40 J
(C) 60 J
(D) 80 J
10. The system returns from $B$ to $A$ along path BDA. If the work done on the system is 30 J , what will be the amount of heat liberated/generated?
(A) -90 J
(B) 90 J
(C) 30 J
(D) -30 J
11. Acentric factor for Argon is
(A) $>1$
(B) 1
(C) 0
(D)
12. Wet steam at $270^{\circ} \mathrm{C}$ enters a throttling calorimeter with enthalpies of $1200 \mathrm{~kJ} / \mathrm{kg}$ and $2800 \mathrm{~kJ} / \mathrm{kg}$ in liquid and gas phase, respectively. It leaves as supersaturated steam at 0.1 MPa and $120^{\circ} \mathrm{C}$ with an enthalpy of $2700 \mathrm{~kJ} / \mathrm{kg}$. The quality of steam is
(A) $14 / 16$
(B) 13/16
(C) 15/16
(D) $27 / 40$
13. Superheated steam at 3 MPa and $300^{\circ} \mathrm{C}$ having enthalpy of $3000 \mathrm{~kJ} / \mathrm{kg}$ enters a turbine at the rate of $1 \mathrm{~kg} / \mathrm{sec}$ and leaves as dry saturated steam at $60^{\circ} \mathrm{C}$ with an enthalpy of $2600 \mathrm{~kJ} / \mathrm{kg}$. If kinetic and potential energy changes are ignored, the power output of the turbine is
(A) 400 kW
(B) 5600 kW
(C) 3000 kW
(D) 2600 kW

Statement for Linked Answer - Questions 14 and 15:

A reversible heat engine absorbs 800 kJ as heat from a reservoir at 600 K and rejects 100 kJ energy as heat to a reservoir at 300 K , as shown in the following figure.

Q14. The heat interaction (Q) with reservoir at 400 K is
(A) -600 kJ
(B) 400 kJ
(C) -400 kJ
(D) 600 kJ
15. The work done $(\mathrm{W})$ by the engine is
(A) 500 kJ
(B) 400 kJ
(C) 350 kJ
(D) 300 kJ
16. The partial volume of component $A$ in a binary mixture $(A-B)$ is $60 \times 10-6 \mathrm{~m} 3 / \mathrm{mol}$. The mole\% of $A$ in the mixture is $60 \%$. The density of the mixture is $760 \mathrm{~kg} / \mathrm{m} 3$. What will be the partial volume ( $\mathrm{m} 3 / \mathrm{mol}$ ) of $B$ in the mixture?
(Given: Molar mass of $A$ is $50 \times 10-3 \mathrm{~kg} / \mathrm{mol}$; molar mass of $B$ is $20 \times 10-3 \mathrm{~kg} / \mathrm{mol}$ )
(A) $30 \times 10-6$
(B) $35 \times 10-6$
(C) $40 \times 10-6$
(D) $60 \times 10-6$
17. The enthalpy of vaporization of water at $100^{\circ} \mathrm{C}$ is $2300 \mathrm{~kJ} / \mathrm{kg}$. The isobaric heat capacities of liquid and vapor are, respectively, $4.0 \mathrm{~kJ} / \mathrm{kg}-\mathrm{K}$ and $2 \mathrm{~kJ} / \mathrm{kg}-\mathrm{K}$. The enthalpy of vaporization at $150^{\circ} \mathrm{C}$ will be
(A) $2400 \mathrm{~kJ} / \mathrm{kg}$
(B) $2100 \mathrm{~kJ} / \mathrm{kg}$
(C) $2500 \mathrm{~kJ} / \mathrm{kg}$
(D) $2200 \mathrm{~kJ} / \mathrm{kg}$
18. The following equations have been proposed for an isothermal binary solution where the standard states are the pure components at the solution temperature and pressure:
$y 1=A x 1 ; y 2=B x 2$
What can be said about the above relation?
(A) It satisfies Gibbs-Duhem equation
(B) It does not satisfy Gibbs-Duhem equation
(C) It is thermodynamically consistent
(D) It satisfies both (A) and (C)
19. The enthalpy change of some reactions are given below:
$\mathrm{CO}(\mathrm{g})+\mathrm{O} 2(\mathrm{~g}) \rightarrow \mathrm{CO} 2(\mathrm{~g}) \Delta \mathrm{H}=-300 \mathrm{~kJ}$
$\mathrm{H} 2(\mathrm{~g})+\mathrm{O} 2(\mathrm{~g}) \rightarrow \mathrm{H} 2 \mathrm{O}(1) \Delta \mathrm{H}=-320 \mathrm{~kJ}$
$\mathrm{H} 2 \mathrm{O}(1) \mathrm{H} 2 \mathrm{O}(\mathrm{g}) \Delta \mathrm{H}=50 \mathrm{~kJ}$
What will be the enthalpy change for the following reaction:
$\mathrm{CO}(\mathrm{g})+\mathrm{H} 2 \mathrm{O}(\mathrm{g})$ à $\mathrm{CO} 2(\mathrm{~g})+\mathrm{H} 2(\mathrm{~g})$
(A) $-70 \mathrm{~kJ}(\mathrm{~B}) 30 \mathrm{~kJ}(\mathrm{C})-30 \mathrm{~kJ}(\mathrm{D}) 70 \mathrm{~kJ}$
20. The decrease in the Helmholtz Free Energy for system in a given process for which initial and final temperatures are equal to the surrounding temperature indicates.
(A) Maximum work obtained from the system
(B) Minimum work obtained from the system
(C) Minimum work which can be done on the system
(D) Both (A) and (C)
