## TYPES OF NUMBERS

I. Natural Numbers : Counting numbers I, 2. 3, 4, 5, ..... are called natural artillery.
2. Whole Numbers : All counting numbers together with zero form the set of whole number. Thus,
(A) 0 is the only whole number which is not a natural number.
(B) Every natural number is a whole number
3. Integers : All natural numbers. 0 and negatives of counting numbers ie., 3, - 2, - 1. 0 .
I. 2, 3...... together form the set of integers
(A) Positive Integers $\mathrm{t} 11.2 .3,4, \ldots . .1$ is the set of all positive integers.
(B) Negative Integers : ( $-1,-2,-3 \ldots . . .1$ is the set of all negative integers.
(C) Non-Positive and Non-Negative integers : 0 is neither positive nor negative.

So, $0,1,2,3$. ..... I represents the set of non-negative integers, while ( $0,-\mathrm{I}$, - 2 , - 3, )
represents the set of non-positive integers.
4. Even Numbers: A number divisible by 2 is called an over, number. e.g.. 2 .
4. 6, 8. 10. etc
5. Odd Numbers : A number not divisible by 2 is called an odd number. es, 1. $3.5,7,9,11$, etc.
6. Prime Numbers : A number greater than 1 is called a prime number, if it has exactly
two factors namely 1 and the number itself.
Prime lumbers upto 100 are . $2,3,5,7$. II, 13. 17. 19. 23. 29. 31, 37. 41, 43, $47,53,59,81,87,71.73,79,83,89,97$.
7. Composite Numbers : Numbers greater than 1 which are not prime, are known OS composite numbers. eg., 4. 6. 8. 9, 10. 12.
Note : (1) 1 as neither prime nor composite.
(ii) 2 is the only even number which is prime.
(iii)There are 25 prime numbers between 1 and 100 .
8. Co-primes prime numbers $a$ and $b$ are said to be co primes. if their H.C.F. is 1 .
e,g., (2, 3), (4. 5). (7, 9), (8. 11). etc. are co-primes. sbi po preparation continues....
